

SUMMER AI WORKSHOP

AI Agents and Automation

Paul Wayland

Business + Technology @

AI as
a conversation partner

AI as
part of a system that can do **work**:
plan steps
call tools
use information
make decisions (within limits)
ask for approval
leave a trace

~~AI with a soul~~

AI Answers

AI Takes Actions

low-risk

explain this

write this

summarize this

create a calendar event

send an email

update a spreadsheet

run code

search files

submit a form

trigger another system

changes the *world*

Answer: Here is a study plan.

Draft action: Here is an email you could send.

Proposed action:

I found three available times. Should I schedule one?

Executed action:

I scheduled the meeting and emailed everyone.

CHATBOT

AI that responds to messages

No **agency** without tools

“Explain photosynthesis like I’m a freshman.”

STRUCTURED PROMPT

Create a 7-day study plan from these notes.

Use a table.

Include quizzes.

Do not invent topics.

WORKFLOW

- upload article
 - extract claims
 - verify sources
- produce comparison table

AUTOMATION

every Friday at 5 PM, copy form
responses into a spreadsheet
and send a reminder email

AGENT

makes decisions... about how to pursue a goal

plan

choose tools

inspect results

revise its approach

continue until stopping condition

AGENT

Monitor this assignment folder,
identify missing submissions, draft
reminders, and ask me before sending.

Explica este párrafo en lenguaje más sencillo.

Chatbot

Trigger:

student question

Action:

text response

Human checkpoint:

student checks understanding

Usa el modelo para crear un plan de estudio de mi prontuario.

Structured prompt

Trigger:

user submits syllabus

Action:

generated plan

Checkpoint:

student verifies dates/topics

Resume el artículo, extrae ideas centrales, prepara preguntas.

Workflow

Trigger:

user starts process

Action:

multi-step analysis

Checkpoint:

before accepting summary/evidence

Cada lunes envíame un recordatorio de las próximas tareas.

Automation

Trigger:

schedule

Action:

reminder message

Checkpoint:

initial setup and occasional review

**Por cada tarea que añada a mi calendario,
sugiere cuándo debo estudiar.**

Agent-ish workflow

Trigger:

new calendar/task data

Action:

recommendations

Checkpoint:

before calendar edits

**Envíale un correo electrónico a mi professor
cada vez que se me pase una fecha de entrega.**

Risky automation

Trigger:

missed deadline

Action:

external e-mail

Checkpoint:

must require human approval before sending

**Encuentra fuentes para mi proyecto,
compáralas y pregúntame cuales utilizar.**

Agentic research assistant

Trigger:

research goal

Action:

search/compare/recommend

Checkpoint:

source selection and verification

Borra los archivos duplicados en la carpeta de mi proyecto.

High-risk agent/automation

Trigger:

command/schedule

Action:

file deletion

Checkpoint:

preview list, backup, explicit approval

Build a study plan from a syllabus and upcoming deadlines.

Goal: “Help the student prepare for Exam 1.”

Plan: identify exam date, topics, weak areas, available days.

Tool/action: read syllabus excerpt, inspect notes, draft schedule.

Check: compare plan against constraints: time, deadlines, missing topics.

Approval: ask student, “Do you want to use this plan?”

Log: record what information was used, what assumptions were made, what changed

Permissions:

What is the system allowed to access or change?

Build a study plan from a syllabus and upcoming deadlines.

Goal: “Help the student prepare for Exam 1.”

Plan: identify exam date, topics, weak areas, available days.

Tool/action: read syllabus excerpt, inspect notes, draft schedule.

Check: compare plan against constraints: time, deadlines, missing topics.

Approval: ask student, “Do you want to use this plan?”

Log: record what information was used, what assumptions were made, what changed

State:

What does the system know right now?

Build a study plan from a syllabus and upcoming deadlines.

Goal: “Help the student prepare for Exam 1.”

Plan: identify exam date, topics, weak areas, available days.

Tool/action: read syllabus excerpt, inspect notes, draft schedule.

Check: compare plan against constraints: time, deadlines, missing topics.

Approval: ask student, “Do you want to use this plan?”

Log: record what information was used, what assumptions were made, what changed

Memory:

What does the system remember across sessions?

Build a study plan from a syllabus and upcoming deadlines.

Goal: “Help the student prepare for Exam 1.”

Plan: identify exam date, topics, weak areas, available days.

Tool/action: read syllabus excerpt, inspect notes, draft schedule.

Check: compare plan against constraints: time, deadlines, missing topics.

Approval: ask student, “Do you want to use this plan?”

Log: record what information was used, what assumptions were made, what changed

Logs:

What happened, when, and why?

Build a study plan from a syllabus and upcoming deadlines.

Goal: "Help the student prepare for Exam 1."

Plan: identify exam date, topics, weak areas, available days.

Tool/action: read syllabus excerpt, inspect notes, draft schedule.

Check: compare plan against constraints: time, deadlines, missing topics.

Approval: ask student, "Do you want to use this plan?"

Log: record what information was used, what assumptions were made, what changed

Rollback:

Can the action be undone?

Build a study plan from a syllabus and upcoming deadlines.

Goal: "Help the student prepare for Exam 1."

Plan: identify exam date, topics, weak areas, available days.

Tool/action: read syllabus excerpt, inspect notes, draft schedule.

Check: compare plan against constraints: time, deadlines, missing topics.

Approval: ask student, "Do you want to use this plan?"

Log: record what information was used, what assumptions were made, what changed

Least privilege:

Give the AI only the access it needs.

Build a study plan from a syllabus and upcoming deadlines.

Goal: "Help the student prepare for Exam 1."

Plan: identify exam date, topics, weak areas, available days.

Tool/action: read syllabus excerpt, inspect notes, draft schedule.

Check: compare plan against constraints: time, deadlines, missing topics.

Approval: ask student, "Do you want to use this plan?"

Log: record what information was used, what assumptions were made, what changed

Blast radius:

How bad is the damage if it fails?

ADD SAFETY GATES

Un asistente de IA monitorea las fechas de entrega de su curso. Si piensa que te estás quedando atrás, le envía mensaje al profesor y a compañeros de estudio y hace cambios al calendario.
